

Please amend the specification to insert the following:

ABSTRACT

A¹ The present invention contemplates a method for percutaneously providing oxygenated blood retrogradely from the left ventricle via coronary sinus to the heart tissue without a significant left-to-right shunt. The present invention contemplates a two-piece stent combination generally having an arterializing stent and a restricting covered stent.

REMARKS

The Examiner is invited to contact the undersigned attorney at the telephone number set out below if there are any questions or suggestions.

Respectfully submitted,

Date: April 1, 2002
